

# The Bias Report

**Audit**  
13 Apr 2019  
**Date:**

**Data**  
7214 rows  
**Audited:**

**Attributes**  
Unnamed: 0, sex, age\_cat, race  
**Audited:**

**Audit**  
**Goal(s):** [Equal Parity](#) - Ensure all protected groups are have equal representation in the selected set.

[Proportional Parity](#) - Ensure all protected groups are selected proportional to their percentage of the population.

[False Positive Rate Parity](#) - Ensure all protected groups have the same false positive rates as the reference group).

[False Discovery Rate Parity](#) - Ensure all protected groups have equally proportional false positives within the selected set (compared to the reference group).

[False Negative Rate Parity](#) - Ensure all protected groups have the same false negative rates (as the reference group).

[False Omission Rate Parity](#) - Ensure all protected groups have equally proportional false negatives within the non-selected set (compared to the reference group).

**Reference**  
Majority group - The largest groups on each attribute will be used as baseline to calculate relative disparities in this audit.  
**Groups:**

**Fairness**  
80%. If disparity for a group is within 80% and 125% of the value of the reference group on a group metric (e.g. False Positive Rate), this audit will pass.  
**Threshold:**

---

## Audit Results: Summary

[Equal Parity](#) - Ensure all protected groups are have equal representation in the selected set.

**Failed**

[Details](#)

[Proportional Parity](#) - Ensure all protected groups are selected proportional to their percentage of the population.

**Failed**

[Details](#)

<a href="#">False Positive Rate Parity</a> - Ensure all protected groups have the same false positive rates as the reference group).	Failed	<a href="#">Details</a>
<a href="#">False Discovery Rate Parity</a> - Ensure all protected groups have equally proportional false positives within the selected set (compared to the reference group).	Failed	<a href="#">Details</a>
<a href="#">False Negative Rate Parity</a> - Ensure all protected groups have the same false negative rates (as the reference group).	Failed	<a href="#">Details</a>
<a href="#">False Omission Rate Parity</a> - Ensure all protected groups have equally proportional false negatives within the non-selected set (compared to the reference group).	Failed	<a href="#">Details</a>

Audit Results: Details by Fairness Measures

Equal Parity: Failed

What is it?	When does it matter?	Which groups failed the audit:
<p>This criteria considers an attribute to have equal parity is every group is equally represented in the selected set. For example, if race (with possible values of white, black, other) has equal parity, it implies that all three races are equally represented (33% each)in the selected/intervention set.</p>	<p>If your desired outcome is to intervene equally on people from all races, then you care about this criteria.</p>	<p><b>For sex</b> (with reference group as <b>Male</b>)  <a href="#">Female</a> with <b>0.15X</b> Disparity</p> <p><b>For age_cat</b> (with reference group as <b>25 - 45</b>)  <a href="#">Less than 25</a> with <b>0.55X</b> Disparity  <a href="#">Greater than 45</a> with <b>0.16X</b> Disparity</p> <p><b>For race</b> (with reference group as <b>African-American</b>)  <a href="#">Caucasian</a> with <b>0.28X</b> Disparity  <a href="#">Other</a> with <b>0.03X</b> Disparity  <a href="#">Hispanic</a> with <b>0.07X</b> Disparity  <a href="#">Asian</a> with <b>0.00X</b> Disparity  <a href="#">Native American</a> with <b>0.01X</b> Disparity</p>

Proportional Parity: **Failed**

What is it?

When does it matter?

Which groups failed the audit:

This criteria considers an attribute to have proportional parity if every group is represented proportionally to their share of the population. For example, if race with possible values of white, black, other being 50%, 30%, 20% of the population respectively) has proportional parity, it implies that all three races are represented in the same proportions (50%, 30%, 20%) in the selected set.

If your desired outcome is to intervene proportionally on people from all races, then you care about this criteria.

- For sex (with reference group as Male)  
Female with 0.64X  
Disparity
- For age\_cat (with reference group as 25 - 45)  
Less than 25 with 1.48X  
Disparity  
Greater than 45 with 0.41X  
Disparity
- For race (with reference group as African-American)  
Asian with 0.33X  
Disparity  
Other with 0.25X  
Disparity  
Caucasian with 0.42X  
Disparity  
Hispanic with 0.40X  
Disparity

---

False Positive Rate Parity: **Failed**

What is it?

When does it matter?

Which groups failed the audit:

This criteria considers an attribute to have False Positive parity if every group has the same False Positive Error Rate. For example, if race has false positive parity, it implies that all three races have the same False Positive Error Rate.

If your desired outcome is to make false positive errors equally on people from all races, then you care about this criteria. This is important in cases where your intervention is punitive and has a risk of adverse outcomes for individuals. Using this criteria allows you to make sure that you are not making false positive mistakes about any single group disproportionately.

- For sex** (with reference group as **Male**)  
[Female](#) with **0.74X** Disparity
- For age\_cat** (with reference group as **25 - 45**)  
[Greater than 45](#) with **0.42X** Disparity  
[Less than 25](#) with **1.71X** Disparity
- For race** (with reference group as **African-American**)  
[Hispanic](#) with **0.48X** Disparity  
[Other](#) with **0.15X** Disparity  
[Native American](#) with **0.78X** Disparity  
[Asian](#) with **0.27X** Disparity  
[Caucasian](#) with **0.36X** Disparity

[Go to Top](#)

False Discovery Rate Parity: **Failed**

What is it?

When does it matter?

Which groups failed the audit:

This criteria considers an attribute to have False Discovery Rate parity if every group has the same False Discovery Error Rate. For example, if race has false discovery parity, it implies that all three races have the same False Discovery Error Rate.

If your desired outcome is to make false positive errors equally on people from all races, then you care about this criteria. This is important in cases where your intervention is punitive and can hurt individuals and where you are selecting a very small group for interventions.

- For sex** (with reference group as **Male**)  
[Female](#) with **1.40X** Disparity
- For age\_cat** (with reference group as **25 - 45**)  
[Greater than 45](#) with **1.31X** Disparity
- For race** (with reference group as **African-American**)  
[Native American](#) with **0.61X** Disparity  
[Hispanic](#) with **1.56X** Disparity

False Negative Rate Parity: **Failed**

What is it?	When does it matter?	Which groups failed the audit:
<p>This criteria considers an attribute to have False Negative parity if every group has the same False Negative Error Rate. For example, if race has false negative parity, it implies that all three races have the same False Negative Error Rate.</p>	<p>If your desired outcome is to make false negative errors equally on people from all races, then you care about this criteria. This is important in cases where your intervention is assistive (providing helpful social services for example) and missing an individual could lead to adverse outcomes for them. Using this criteria allows you to make sure that you're not missing people from certain groups disproportionately.</p>	<p><b>For race</b> (with reference group as <b>African-American</b>)</p> <p><a href="#">Asian</a> with <b>1.29X</b> Disparity</p> <p><a href="#">Hispanic</a> with <b>1.37X</b> Disparity</p> <p><a href="#">Other</a> with <b>1.40X</b> Disparity</p> <p><a href="#">Caucasian</a> with <b>1.31X</b> Disparity</p>

False Omission Rate Parity: **Failed**

What is it?	When does it matter?	Which groups failed the audit:
<p>This criteria considers an attribute to have False Omission Rate parity if every group has the same False Omission Error Rate. For example, if race has false omission parity, it implies that all three races have the same False Omission Error Rate.</p>	<p>If your desired outcome is to make false negative errors equally on people from all races, then you care about this criteria. This is important in cases where your intervention is assistive (providing help social services for example) and missing an individual could lead to adverse outcomes for them , and where you are selecting a very small group for interventions. Using this criteria allows you to make sure that you're not missing people from certain groups disproportionately.</p>	<p><b>For sex</b> (with reference group as <b>Male</b>)</p> <p><a href="#">Female</a> with <b>0.78X</b> Disparity</p> <p><b>For age_cat</b> (with reference group as <b>25 - 45</b>)</p> <p><a href="#">Greater than 45</a> with <b>0.73X</b> Disparity</p> <p><b>For race</b> (with reference group as <b>African-American</b>)</p> <p><a href="#">Asian</a> with <b>0.56X</b> Disparity</p> <p><a href="#">Hispanic</a> with <b>0.78X</b> Disparity</p> <p><a href="#">Other</a> with <b>0.74X</b> Disparity</p>
